

4D Chart- Tip #88

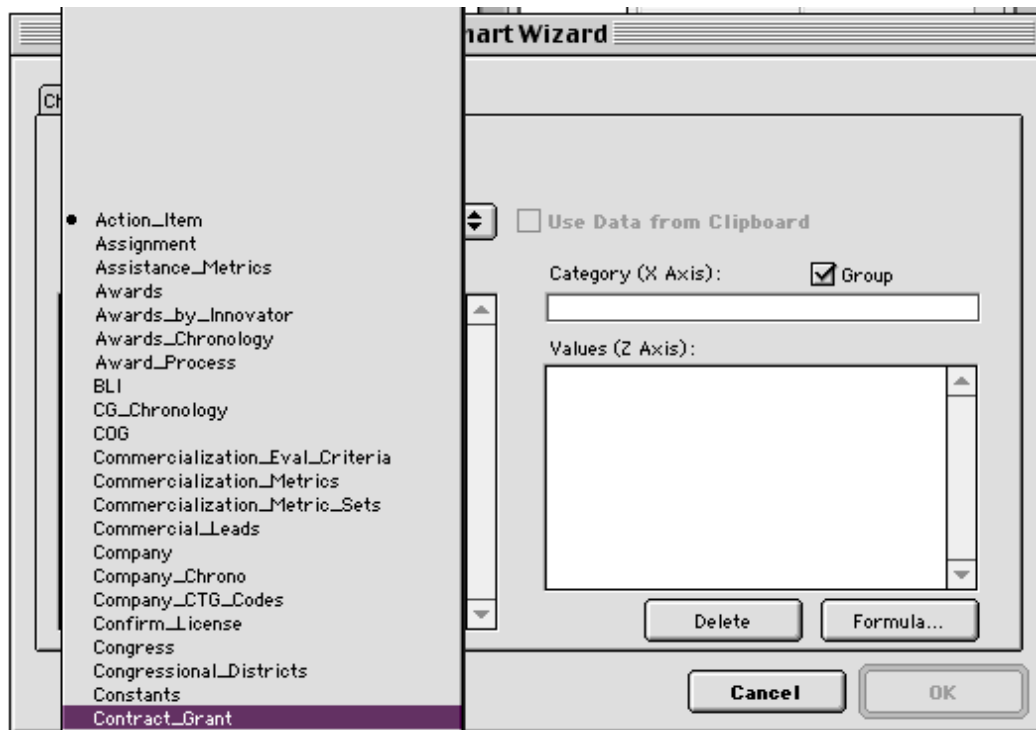

The chart feature is just like doing a quick report where it queries a table for information, it is just represented graphically. These charts can be copied out of 4D and pasted into a Word, Excel or PowerPoint. Please refer to the User Manual in section 005.02.05 for more clarification, but the chart only works on Numeric and Date fields. Some text fields will not work in the Chart Utility, an example would be comments.

Select Chart type by using the Chart Wizard.

4D Chart- Tip #88

Use [Contract_Grant] table as an example. You will need to go to the Data Selection tab in the Chart Wizard. Here you will choose your table from the drop down menu.

4D Chart- Tip #88

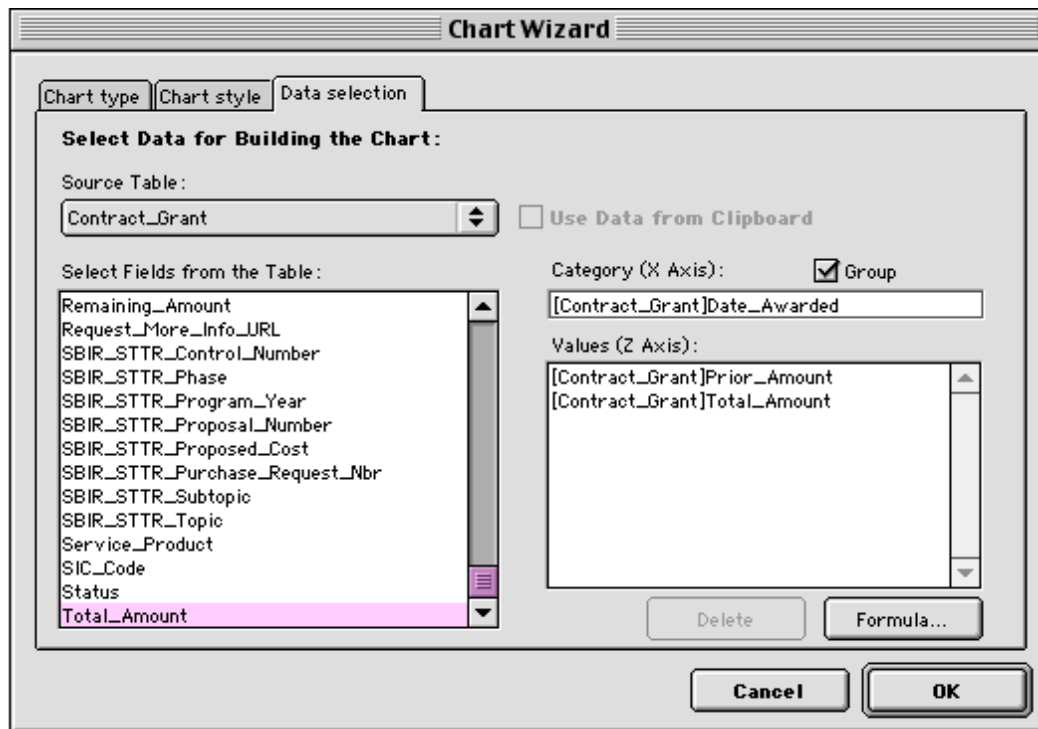

After you have selected your table pull over the field that you want displayed in the chart. The following fields were selected.

X axis would be for example [Contract_Grant]Date_Awarded

Z axis (formally known as the Y from Geometry) can be

[Contract_Grant]Prior_Amount

[Contract_Grant]Remaining_Amount

4D Chart- Tip #88

After the values have been entered in for the axis this is what your chart will look like.

4D Chart- Tip #88

As the user get more comfortable with the chart utility it can be customize to fit your needs as the chart below.

Note: This is the same chart as the one above.
